CHOICE BASED CREDIT SYSTEM
(CBCS)

ST. JOSEPH'S COLLEGE (AUTONOMOUS)
(Nationally Reaccredited with A+ Grade / College with Potential for Excellence)
TIRUCHIRAPPALLI - 620 002

Features of Choice Based Credit System (CBCS)

The Autonomous St. Joseph's College (1978) Reaccredited with A+ Grade from NAAC (2007) has introduced the choice based credit system (CBCS) for UG and PG courses from the academic year 2001-2002.

OBJECTIVES of Credit System:

- * To provide mobility and flexibility for students within and outside the parent department
- * To provide broad based education
- * To help students learn at their own pace
- * To provide students scope for acquiring extra credits
- * To impart more job oriented skills to students
- * To make any course multi-disciplinary in approach

What is a credit system?

Weightage to a course is given in relation to the hours assigned for the course. Generally one hour per week has one credit. However, there could be some flexibility because of practicals, field visits and tutorials. The following Table shows the relation between credits and hours.

Hours in a week	Hours (2-3)	Hours (4)	Hours (5-6)
Theory Credits	1	3	4
Practicals Credits	1	2	3

For UG courses a student must earn a minimum of 140 credits to get a pass. The 140 credits are split as follows:

	BA	BSc	BCom
English	16	16	8
Languages	12	12	12
Allied: Compulsory - 2 courses	10	10	10
Allied: Optional - 2 courses	10	8	10
Computer Literacy	2	2	2
Foundation Courses	3	3	3
Environmental Studies	3	3	3
Electives	9	9	9
SHEPHERD	3	3	3
Core Courses	<u>72</u>	<u>74</u>	<u>80</u>
Total	<u>140</u>	<u>140</u>	<u>140</u>

A student can acquire credits more than 140 by taking electives offered by departments in the free hours available to him in 5th and 6th semesters.

Allied Courses:

The allied courses are of two categories.

Allied Compulsory and Allied Optional: The student has choice in allied optional as two courses are offered simultaneously. The department must offer two courses. The student has to choose one.

Electives

A student should take at least three electives.

A least one elective should be from Arts Department for a student of Science Department and vice versa for Arts students.

A student cannot take more than one elective from his parent department.

Credit System Codes - Subject Code Fixation

The various papers in the different courses are coded. The following code system is adopted.

- The code number of the subject should be as **07UPH1XX** where
 - a) 07 refers to year of revision
 - b) U refers to Undergraduate
 - c) PH refers to Physics*
 - d) 1 refers to Semester 1
 - e) 0X refers to Languages (Part 1)
 - f) 1X refers to General English (Part 2)
 - g) 2X refers to Core Major (Part 3)
 - h) 5X refers to Core Allied Compulsory (Part 3)
 - i) 7X refers to Core Allied Optional (Part 3)
 - j) 8X refers to Elective (Part 3)
 - k) 9X refers to Foundation Course (Part 4)
- } X - Paper number
- The code number of the subject should be as **07PEC1XX** where
 - a) 07 refers to year of revision
 - b) P refers to Postgraduate
 - c) EC refers to Economics*
 - d) 1 refers to Semester 1
 - e) 2X refers to Core
 - f) 4X refers to Optional
 - g) 6X refers to EDC
- } X-Paper number

Codes for Departments:

Evaluation

For each course there is formative Continuous Internal Assessment (CIA) and Semester Examinations (SE) in the weightage ratio 50:50. The following table illustrates how one evaluates the **Overall Percentage Marks (OPM)** for a student in Part I (English) in the four papers put together.

$$\text{OPM} = \frac{a_1b_1 + a_2b_2 + a_3b_3 + a_4b_4}{(b_1+b_2+b_3+b_4)}$$

Where a_1, a_2, a_3 and a_4 indicate the marks obtained in the 4 semesters for English and b_1, b_2, b_3 and b_4 indicate the corresponding credits for the 4 courses. For example let us consider the following marks scored by a student in the 4 semesters in English.

Part II-General English

S. No.	Sem.	Subject	CIA	SE	Total	Avg	Credit	Cr.pts
1.	I	GE-I	50	48	98	49.0	4	196.0
2.	II	GE-II	50	48	98	49.0	4	196.0
3.	III	GE-III	50	50	100	50.0	4	200.0
4.	IV	GE-IV	50	48	98	49.0	4	196.0
TOTAL								788.0

$$\text{OPM} = 788 / \text{total number of credits} = 788.0 / 16 = 49.25$$

This percentage corresponds to III class.

If OPM is between 50 and 60 the student gets II class. If OPM is 60 and more then the student is placed in I class.

If scores OPM=75 and more he gets first class with distinction.

Similarly we can compute OPM for part II and Part III using the marks in various subjects and the corresponding credits.

Part IV consists of foundation courses, computer literacy, SHEPHERD programme, Service Organisation and only a pass is indicated for these and Part IV is not taken into account for computing OPM.

Declaration of result:

_____ has successfully completed B.Sc. degree course with FIRST CLASS. His overall average percentage of marks in part III is _____. He has acquired 11 more credits in the course by taking Foundation Courses, Environmental Studies, Computer Literacy, and SHEPHERD programme.

PLANT DIVERSITY-I
(Algae, Fungi, Lichens and Pathology)

Objectives

1. To study the characteristics of Algae, Fungi and Lichens.
2. To study the various plant diseases and the control measures.

Unit-I Algae

General characteristics of algae, Classification (Fritsch and De Silva), General characteristics of the various divisions (as per Fritsch's system). Thallus organization, prokaryotic and eukaryotic algae (cyanophyceae cell and chlorophyceae cell), pigment, reserve food, flagella characteristics and life cycle patterns. Economic importance of algae.

Unit-II

Detailed study of the following genera: *Oscillatoria*, *Chlorella*, *Oedogonium*, *Caulerpa*, *Cyclotella*, *Sargassum* and *Gracilaria*.

Unit-III Fungi

General characteristics of Fungi; classification according to J. Alexopoulos and G.C. Ainsworth; General characteristics of the various divisions; Economic importance of Fungi.

Unit-IV

Detailed study of morphology and reproduction of *Plasmodiophora*, *Albugo*, *Peziza*, *Puccinia* and *Cercospora*.

Lichens

General characteristics, classification, reproduction and economic importance of Lichens. Detailed study of *Usnea*.

Unit-V Plant Pathology

Classification of diseases – general symptoms. penetration and disease development. Morphological and biochemical defense mechanisms in plants. A detailed study of the following plant diseases – Mosaic disease of tobacco, Citrus canker, Late blight of potato, White rust of crucifers, Red rot of sugarcane, Tikka disease of groundnut (causal organisms, symptoms, disease cycle and control measures).

(General Zoology)**

Objectives

1. To understand the animal organization, their structure and function
2. To understand the various physiological processes in human beings

Animal Organization

Unit-I

General classification of the animal kingdom upto phylum with examples. (Acellular, multicellular, bilateral symmetry, radial symmetry, acoelomate, pseudocoelomate, eucoelomate). Salient features of the 10 major phyla with examples, general features of the subphyla: Urochordata, Cephalochordata, Hemichordata and Vertebrata (Classes: Pices, Amphibia, Reptilia, Aves, Mammalia)

Unit-II

A detailed study of the morphology; physiology of digestion and reproduction- and life cycle of: *Plasmodium vivax*, *Leucosolenia*, *Aurelia aurita*, *Taenia solium* and *Ascaris lumbricoides*
General topics-canal systems of sponges and human disease caused by protozoans.

Unit-III

A detailed study of the morphology, physiology of digestion and reproduction and life cycle of: *Megascolex mauritii*, *Periplaneta americana*, *Pila globosa*, *Asterias rubens*, *Rana hexadactyla*. General topics-water vascular system and larval forms of Echinodermates.

Principles of Human Physiology

Unit-IV

Physiology of digestion. Respiration: transport of oxygen and carbon dioxide, cellular oxidation, respiratory quotient, oxygen debt. Excretion: structure of nephron, physiology of urine formation, physical characteristics and chemical composition of urine. Hormonal control and general mode of action of water soluble and steroid hormones, physiology of reproduction.

Unit-V

Physiology of circulation-arterial and venous-heart. Blood: structure of haemoglobin, types of white blood cells, blood clotting, haemopoiesis, function of plasma proteins, blood grouping. Nervous control: nerve impulse transmission, synaptic transmission, muscle contraction, proteins involved in muscle contraction.

PLANT DIVERSITY-II
(Bryophytes, Pteridophytes & Gymnosperms)

Objectives

1. To study the salient features of plants belonging to Bryophytes, Pteridophytes and Gymnosperms.
2. To study the fossilization process and formation of different types of fossils.

Unit-I Bryophytes

General characteristics of Bryophytes, Classification based on Rothmaler (1951), vegetative reproduction methods, economic importance of bryophytes. A detailed study of the following genera: *Marchantia*, *Anthoceros* and *Funaria*.

Unit-II Pteridophytes

General characteristics, stelar evolution, economic importance, homosporous, heterosporous and seed habit. Classification (Reimer's System, 1954). General characteristics of major divisions, *Psilophyta*, *Lycophyta*, *Sphenophyta* and *Pterophyta*.

Unit-III

A detailed study of the following genera –*Lycopodium*, *Isoetes*, *Equisetum*, *Adiantum* and *Marsilea* (developmental details not required).

Unit -IV Gymnosperms

General characteristics, distribution, classification (Sporne, K.R). Salient features of *Pteridospermales*, *Bennettitales*, *Cycadales*, *Cordaitales*, *Coniferales* and *Gnetales* –A detailed study of the following genera: *Cycas*, *Araucaria* and *Gnetum* (developmental details not required)

Unit-V Paleobotany

Fossils, fossilization process, different types of fossils (compression, impression, petrification, coal balls). Geological time table. A detailed study of external and internal morphology and reproduction in *Rhynia*, *Lepidodendron*, *Calamites*, *Williamsonia* and *Cordaites*.

Objectives

1. To study the classification of insects
2. To study beneficial and harmful insects and various control measures of harmful insects

Unit – I

Insect morphology: head, external structure, tentorium, compound eye, types of antennae- thorax- tergum, sternum, pleuron. Wing structure and coupling mechanism, wing venation, Legs and their modification, Abdomen- abdominal appendages, Male and female external genitalia.

Unit – II

Physiology of digestive, respiratory, circulatory, nervous and reproductive systems, Immature stages of insects-metamorphosis – types- hormonal regulation.

Unit – III

Economically important insect orders – Coleoptera, Dictyoptera, Diptera, Hemiptera, Hymenoptera, Isoptera and Lepidoptera, - general characters and classification upto order, social behavior/life of insects.

Unit – IV

Economic classification of insects – Beneficial (predators, parasites, pollinators, weed killers and scavengers) . Destructive insects, a general knowledge of Apiculture, sericulture, lac culture. Recent trends in Integrated Pest Management. Plant protection-physical, chemical and biological methods of pest control.

Unit – V

TAXONOMY, ANATOMY AND EMBRYOLOGY

Objectives

1. To demonstrate proficiency with the basic terminology of plant morphology and to recognize and identify major families of plants and their economic importance.
2. To impart knowledge about the various components and characters of wood.
3. To study the basic principles of embryo.

Unit-I

Contemporary systems of classification Bentham & Hooker and Takhtajan systems – merits and demerits. Taxonomic hierarchy. ICBN – principles, rules and recommendations. Type concept and various types. Effective and valid publications. Citation of author.

Unit-II

Biosystematics. Introduction to sources of taxonomic informations. Study of the general characteristics and economic importance of Annonaceae, Tiliaceae, Rutaceae, Myrtaceae.

Unit-III

Study of the general characteristics and economic importance of Cucurbitaceae, Apiaceae, Rubiaceae, Sapotaceae, Apocynaceae, Asclepiadaceae, Lamiaceae, Amaranthaceae, Orchidaceae, Amaryllidaceae, Pontederiaceae and Poaceae.

Unit-IV

Anomalous secondary growth in dicots and monocots. Nodal anatomy – unilacunar, trilacunar and multilacunar types. Wood Anatomy – Ultrastructure and basic properties of wood. Chemical composition of wood elements. Classification of wood. Commercial wood species of South India.

Unit -V

Structure and development of anther – microsporogenesis – male gametophyte. Structure and development of megasporangium – megasporogenesis – female gametophyte. Fertilization – endosperm types – development of typical dicot (*Capsella*) and monocot (*Najas*) embryos. Polyembryony - Apomixis.

PRACTICAL-III
(Taxonomy, Anatomy and Embryology)

Taxonomy

Classification and identification (upto genus with the help of flora) of at least two species each of the families covered in theory with reference to local flora,. Annonaceae, Tiliaceae, Rutaceae, Myrtaceae, Cucurbitaceae, Apiaceae, Rubiaceae, Sapotaceae, Apocynaceae, Asclepiadaceae, Lamiaceae, Amaranthaceae, Orchidaceae, Amaryllidaceae, Pontederiaceae, and Poaceae.

At least two field trips to be planned to study the flora of various hills and plain.

Herbal medicine (Visit to a herbal garden and submission of the report).

Anatomy

Anomalous secondary thickening in *Aristolochia*, *Bignonia*, *Boerhaavia*, *Thunbergia* and *Dracaena*.

Nodal anatomy.

Preparation of keys to identify any five important timbers of South India on the basis of anatomical characters.

Embryology

TS of young and mature anther, ovule, endosperm types and dissection and isolation of developmental stages of embryos.

Covalent bond – Properties of covalent molecules, Structures of BCl_2 , BF_3 , NH_3 , H_2O , CH_4 , SiH_4 , ClF_3 , SF_4 , SF_6 , PCl_3 , PCl_5 . Ionic bond – Ionization energy, electronegativity, electron affinity, lattice energy, properties of ionic molecules crystalline structure of ionic molecules. BCC, FCC, NaCl, CsCl. Coordinate bond – ligands, classification of ligands, nomenclature of complexes, oxalate, citrate, tartrate, DMG, EDTA ligands and their importance. Structure of $[\text{Ag}(\text{NH}_3)_2]^+$ linear; $[\text{Cu}(\text{NH}_3)_4]^{2+}$ square planar; $[\text{Ni}(\text{Cl})_4]^{2-}$ Td; $[\text{Pt}(\text{CN})_4]^{2-}$ square planar; $[\text{Fe}(\text{CN})_6]^{2-}$ octahedral. Hydrogen bond – Kinds-intra and inter consequences of H-bond mp, bp, dimer formation, importance of it in biopolymers (proteins and Nucleic acid).

UNIT II ORGANIC CHEMISTRY

Hydrocarbons: Classification (Aliphatic / Aromatic, Saturated/Unsaturated, cyclic/acyclic) nomenclature. Elimination Reactions: 1. Dehydrohalogenation of alkyl halides to alkenes. 2. Dehydration of alcohols to alkenes. Substitution Reaction: 1. Aliphatic nucleophilic substitution. 2. Aromatic electrophilic substitution. Addition Reaction: 1. Electrophilic addition of HX to alkene. 2. Nucleophilic addition of NH_3 to aldehyde or ketone. Condensation Reaction: 1. Aldol Condensation. 2. Condensation to polymerization (phenol to bakelite)

UNIT III QUANTITATIVE ANALYSIS

Error Analysis: accuracy, precision, errors, determinate and indeterminate errors, eliminating and minimizing error, relative error, absolute error. Quantitative Analysis: titrimetry, gravimetry, colorimetry. Titrimetric analysis: acid-base, redox, complexometric, precipitation. And example each with indicators used. Concentration units: mole, molarity, molality, formality, normality, ppb, ppm, mole fraction, %W/V, V/V. Acid-base titration: primary standard, secondary standard, $V_1N_1=V_2N_2$, acid-base titration, indicators in the illustration

UNIT IV AGRICULTURAL CHEMISTRY

Soil types- red soil, black soil, alluvial soil, desert soil, red soil; role of humus: Manures and their importance. Chemical fertilizers: Natural and synthetic fertilizers: NPK fertilizers: manufacture of NPK fertilizers, mixed fertilizers; role of macronutrients and micronutrients; Pesticides: classification-insecticides, herbicides and fungicides; Structure of important pesticides: DDT, BHC, 2,4-D, 2,4,5-T; biomass and its utilization; triple revolution India(Green, Blue and White).

UNIT V: BIOINORGANIC CHEMISTRY

Chemistry of chlorophyll, porphyrin unit and photosynthesis. Nitrogen fixation, carbon cycle. Chemistry of haem proteins: haemoglobin, myoglobin. Oxygen transport and respiration. Metallo enzymes, vitamins containing metals

CELL BIOLOGY AND GENETICS

Objectives

1. To study the progress made in the field of cell, cell organelles and their functions.
2. To understand the principle, the hereditary mechanism, the structure and functions of genetic materials.

Unit-I

Cell cycle, regulation and mechanism. Structure of cytoplasm, cytoskeleton and microtubules. Cellular mechanisms in development and differentiation, factors, basic principles of cell signaling and the machinery.

Unit-II

Cytoplasmic organelles: basic membrane structure, organization and functions of nucleus, mitochondria, chloroplasts, ER, ribosomes, golgi complex, lysosome and vacuole.

Unit-III

Laws of heredity, gene interaction and chromosome basis of heredity. DNA is the genetic material: proof: Griffith's, Avery *et al.*, and Hershey and Chase. RNA as genetic material, Sanger's Proof. Sex linked inheritance, sex determination mechanism.

Unit-IV

Structure of DNA and RNA. Nucleosides and nucleotides. Primary, secondary and tertiary structures. Chromatin nucleosomes and chromosomal proteins, protamines and histones, organization of prokaryotic genome. Special types – polytene & Lamp brush.

Unit-V

Population genetics : gene frequency, gene pool, Hardy–Weinberg equilibrium. Gene frequencies – conservation and changes. Decline of human gene pool and eugenics. Basic knowledge and applications of genomics and proteomics. Genomics: plant, animal and structural and functional genomics, human genome project.

UNIT I PHYSICAL CHEMISTRY

Thermodynamics of a chemical reaction – Terms ΔE , ΔH , ΔS , ΔG , endothermic, exothermic reactions, conditions for spontaneity of reactions, calorific value of food substances. Chemical Kinetics - rate, order, molecularity of reactions. Importance of kinetic study, activation energy, activated complex, factors affecting rate of the reactions, the order of biological reactions.

Catalysis - Effect of catalysis, kinetics of enzyme catalysis, Michaelis - Menten constant, active sites, turn over number, factors affecting enzyme catalysis-concentration of substrate, temperature, pH and inhibitors.

UNIT II PHARMACEUTICAL CHEMISTRY

Classification of drugs: Definitions of: Drug, pharmacophore, pharmacognony, pharmacy, pharmacokinetics, pharmacodynamics, pharmacopoeia (IP, BP, USP). Antibiotics: Penicillin, chloramphenicol, tetracyclins, streptomycin (Only the structure properties and SAR): Analgesics, Antiinflammatory agents: General and local anaesthetics; Inhalation anaesthetics (N_2O , $CHCl_3$, haloethane, ethylchloride). Intravenous anaesthetics (thiopental sodium); Sedatives and hypnotics. Cardiovascular Drugs: Classification and examples: cardiac glycosides, anti-hypertensive and anti-hypotensive drugs, antiarrhythmic agents, vasodepressor drugs. Antimalarials & sulphonamides

UNIT III CHEMISTRY OF NATURAL PRODUCTS

Structural Elucidation of the functional groups in natural products by chemical methods (-OCH₃, -OH, -COOH, -COOR, oxidation, reduction). Alkaloids: Classification, occurrence: structure, physical properties and uses of: papaverine, nicotine, coniine. Terpenes: Classification, isolation, structure, properties and uses of camphor, citral and α -pinene. Importance and uses of anthocyanins, flavones and flavonoids.

UNIT IV ORGANIC ANALYSIS

Qualitative analysis of organic substances: test for saturation and unsaturation; aliphatic & aromatic; acidic, basic, and neutral nature; elements test for N, S and halogens; functional groups like acid, phenol, aldehyde, ketone, carbohydrate, amine, ester, amide and diamide.

UNIT V CHROMATOGRAPHY

Chromatographic Techniques: Principle, instrumentation, sampling and applications of Paper, thin layer, column chromatography - gas chromatography and High performance liquid - chromatographic techniques.

MICROBIOLOGY

Objectives

1. To study the different types of micro-organisms and their activities.
2. To understand and exploit their potentialities in agriculture, industry and other environmental aspects.

Unit-I

Histry and scope of microbiology, characterization and classification of microorganisms. – Whittaker's five kingdom concept – Bergey's manual of systematic bacteriology - Morphology, growth, nutrition and reproduction of bacteria. Viruses – structure, classification and reproduction. A general account on Rickettsias, Chlamydias and Mycoplasmas.

Unit-II

Culture of microorganisms: Pure cultures, batch and continuous cultures. Preservation of microorganisms. Microorganisms and Human diseases. Food borne (Botulism and Gastroenteritis), water borne (Typhoid & Cholera) Air borne (Small pox and Tuberculosis), vector borne (Plaque and malaria) and contact diseases (Mycoses and Candidiasis). Control of microorganisms – physical, chemical and biological methods.

Unit-III

Soil Microbiology – role of microbes in Biogeochemical cycles (carbon, nitrogen and sulphur). Aquatic Microbiology - Microbiology of air. Food microbiology, types of food spoilage and methods of food preservation. Microbiology of milk & dairy products.

Unit-IV

Industrial microbiology – role of microbes in various industries - Fermentors and fermentation technology. – large scale production of ethanol, single cell protein, lactic acid, glutamic acid, amylase, penicillin, insulin, vaccines and interferons.

Unit-V

Role of microbes in agriculture – microbes in nitrogen fixation and phosphate solubilization – Biofertilizers – algal (BGA), bacterial (*Azospirillum*, *Rhizobium*) and mycorrhizal (VAMF). Biopesticides - their types and applications – *Bacillus thuringiensis* and Baculoviruses. Microbes and biogas production – sewage treatment – primary, secondary and tertiary treatments. Biodegradation of cellulose, lignin, petroleum wastes and heavy metals.

PRACTICALS-V
(Biodiversity and Conservation & Microbiology)

Biological Diversity

Study of community structure:

1. Quadrat method
2. Line transect method
3. Study of soil texture and porosity

Study of aquatic environment:

4. Dissolved Oxygen
5. Total hardness
6. Chlorides
7. Carbonates and bicarbonates
8. Environmental adaptations of mangroves, xerophytes and hydrophytes

Visit to Anglade institute (Kodaikanal) and submission of report.

Microbiology

1. Preparation of common media (Nutrient agar & Potato agar)
2. Staining of Bacteria (Simple & Grams staining)
3. Isolation and enumeration of microbes in soil and water
4. Study of motility by Hanging Drop
5. Pure cultures of bacteria – Streak plate, Pour plate and Spread plate
6. Microbiology of milk (Qualitative and Quantitative tests)
7. Antibiosis

Visit to TNAU or Dairy farm and submission of report.

MOLECULAR BIOLOGY

Objectives

1. To study basic molecular mechanism in organisms
2. How the genes unravel themselves in conferring the traits on the organism.

Unit-I

DNA replication : semi conservative model, proof, DNA polymerase, chemistry of synthesis, mechanism of replication in *E. coli*. Differences in eukaryotes, replication of RNA genome – replicase and reverse transcriptase.

Unit-II

Mutation : types of mutations. Mutagenic agents: physical, chemical and biological, mutagenesis and its applications, chemical basis of mutations, DNA repair – mismatch and proof reading, photoreactivation, excision, recombination and SOS mechanisms in bacteria.

Unit-III

Gene expression and the Central Dogma, transcription: RNA polymerase, signals, chemistry of RNA synthesis, mechanism of initiation, elongation and termination in *E. coli*. Differences in eukaryotes, post-transcriptional processing, spliceosomes.

Unit-IV

Translation – organization of mRNA, genetic code and its characterization, ribosome and rRNA, amino acyl synthetase, tRNA and amino acid activation. Mechanism of initiation, elongation and termination. Translation factors, post-translation processing.

Unit-V

Regulation of gene expression: The principles, cooperative and on-off regulations. Molecular mechanism : negative and positive, repressors and inducers. Mechanism of *Lac* operon and *trp* operon in *E.coli*. Differences in gene expression regulation in eukaryotes. Principle of RNA interference and RNA silence.

GENETIC ENGINEERING

Objectives

1. To understand the basic mechanism involved in the production of transgenic microbes, plants and animals
2. To know the role of advanced techniques such as PCR, RFLP and RAPD in molecular biology.

Unit-I

Basic principles – genetic engineering by *Agrobacterium* in nature; Steps in RDT, methods to generate foreign genes and strategies of joining DNA molecules – ligases, linkers and homopolymers.

Unit-II

Enzymes used in genetic engineering: restriction enzymes:- types, properties and cleavage sites. Gene cloning strategies, cDNA and Genomic libraries.

Unit-III

Plasmids and vectors, their properties and types - Ti, pBR, cosmids and shuttle vectors. Screening of recombinants. Expression of cloned genes and the problems, selectable markers and reporters.

Unit-IV

Methods of gene transfer to animals, plants and bacteria: Microinjection, *Agrobacterium* mediation, Ca-transfection, electroporation, shotgun, lipofection, scrape fection, nuclear transplantation, embryonic stem cells and infection by recombinant viruses. Fate of introduced genes.

Unit-V

Principles and applications of molecular techniques: DNA sequencing strategies, gene mapping and nucleic acid hybridization techniques (Southern, northern, western, southwestern blotting) – DNA fingerprinting, PCR, RFLP, RAPD and microarrays.

BIOCHEMISTRY AND PHYSIOLOGY

Objectives

1. To understand the structure and properties of Biomolecules.
2. To study the various physiological processes in plants related to metabolism, growth and reproduction .

Unit-I

Biochemistry – definition and scope. Basic principle, instrumentation and working of pH meter, colorimeter, spectrophotometer, chromatography, centrifuge and electrophoresis. Enzyme classification, structure, mechanism of action, Factors affecting enzyme activity, Enzyme inhibitors (competitive, uncompetitive, noncompetitive and Feedback Inhibitions).

Unit-II

Carbohydrates, classification, structure and properties of monosaccharides, disaccharides and polysaccharides (starch, glycogen, cellulose, inulin and pectin). Amino acids – basic structure, classification and properties. Proteins – classification, different levels of organization (primary, secondary, tertiary and quaternary structures). Lipids – classification, saturated and unsaturated fatty acids. Elementary study of secondary plant substances (porphyrins, phenols, terpenoids, alkaloids).

Unit-III

Water: importance to life – molecular structure – properties. Water potential – solute potential – and pressure potential. Absorption and transport of water, mineral ion uptake, Transpiration: Types, role, Stomatal physiology, factors affecting transpiration. Guttation, Translocation of organic solutes: – source-sink relationship. Mineral nutrition, role, deficiency symptoms of macro and micro elements, hydroponics and its applications., Nitrogen cycle – sources of nitrogen – Biological nitrogen fixation – Physiology of nodule formation – Biochemistry of nitrogen fixation – leghaemoglobin, lectin and nif genes. Nitrate assimilation – amino acid synthesis by reductive and transamination reactions – GDH and GS/GOGAT pathways.

Unit-IV

Photosynthesis: Photosynthetic apparatus and pigments. Pigment systems, Emerson Effect – photochemical reactions – cyclic and noncyclic electron transports, CO₂ fixation cycles (C₃ cycles), C₃, C₄ and CAM pathways – factors affecting photosynthesis. C₂. PCO cycle (Photorespiration) – its significance and regulation

Respiration: Respiratory substrates, RQ, Anaerobic and aerobic respirations. Glycolysis pathway and regulation. TCA cycle: discovery, pathway, regulation. Mitochondrial electron transport – Oxidative phosphorylation by chemiosmotic mechanism. Pentose Phosphate Pathway – its significance.

Unit-V

Growth: Stages of growth, factors affecting vegetative growth. Auxins, Gibberellins, cytokinins, ethylene and abscisic acid, applications of phytohormones in agriculture and horticulture. Photoperiodism and vernalization, seed dormancy – causes and methods of breaking dormancy, Physiology of seed germination, Irritability and movements.

BIOTECHNOLOGY

Objectives

1. To study the emerging trends in biotechnology such as gene therapy, DNA finger printing and molecular cloning
2. To enumerate the role of 21st century science, biotechnology in increasing productivity of crop plants, to enhance the production of high value metabolites.

Unit-I

Tissue culture techniques – micro propagation, culture of callus and embryoids, somaclonal variations, culture of haploids, protoplast fusion and culture of cybrids . Applications of plant tissue culture.

Unit-II

Transgenic plants – Bt crops. GM crops resistant to fungal and viral diseases, herbicide, drought and salinity. GURTs and technology protection systems: Terminator technology.

Unit-III

Anti-sense RNA technology and the flavr savr tomato.RNAi, gene silencing, Plantibodies, monoclonal antibodies and hybridoma technology. Gene therapy, immunotoxins and recombinant vaccines.

Unit-IV

Cloning – therapeutic and reproductive. Xenografting and animal organ donors. Embryonic stem cell research. Biotechnology in aquaculture – ploidy induction, gynogenesis, and androgenesis. Transgenic fishes.

Unit-V

Control of pests: juvenile hormone analogues. Hazards of biotechnology – deliberate release, biosafety issues of GMOs and GM foods, genetic erosion. IPRs, patents and the issues.

IMMUNOLOGY

Objectives

1. To understand the basic immune system of the human beings
2. To understand the mechanism of antigen and antibody interaction

Unit-I Introduction

Immune system - adaptive, innate, humoral and cellular immunity. Origin, structure and immunological role of primary lymphoid organs (bone marrow, thymus, Bursa of Fabricius) and Secondary lymphoid organs (Spleen, lymph nodes, Payer's patches, tonsils, appendix).

Unit-II

Origin, structure and immunological role of immune cells (Leucocytes and lymphocytes)
Lymph- composition and functions
Antibody types - study of Ig G, its structure and immunological role.

Unit-III

Characteristic features of antigens – Immunogen – Hapten – Adjuvant – Epitope – Paratope – Antigen – Antibody interactions – Affinity, Avidity, Cross reactivity, precipitation, agglutination. Production of B & T lymphocytes in the body – Antibody production by plasma cells.

Unit-IV

Primary and secondary immune responses. Vaccines – Definition, Types; Vaccination schedule. Immune response against intracellular pathogens (virus & bacteria) and extra cellular pathogens (bacteria, fungi, protozoans and worms).

Unit-V Basic Immunological Techniques and their applications.

Principle, protocol, and applications of Blood grouping (ABO/Rh) – Total Lymphocyte count- Isolation of T & B lymphocytes- Raising antibodies in rabbit- VIDAL test for Typhoid- VDRL test for Syphilis- Latex agglutination test for RA- ELISA (types)- Sandwich ELISA for pregnancy. Immunoelectrophoresis .

BIOINFORMATICS AND NANOBIO TECHNOLOGY

Objectives

1. To introduce the students to the modern explorations of advanced sciences.
2. To engage them in self-search of futuristic sciences.

Unit-I

Web browsing – basic information, Introduction to bioinformatics anatomy and working of computer, internet concepts. Nucleic acids database – NCBI, alignment techniques – pairwise multiple, BLAST & FASTA.

Unit-II

Protein Database – SWISS - PROT, GenBank and DDBJ, TrEMBL, PROSITE, BLOCKS, PDB & MMDB. Phylogenetic analysis, SCOP and OWL.

Unit-III

Drugs – basic information: classification & metabolism. Phase I & II. Receptor interactions. Detoxification role of cytochrome P450 system. Clinical trials. Pharmacogenomics, principles of drug designing.

Unit-IV

Nanotechnology – an introduction, scope of nanobiotechnology and nanomedicines. Cellular nano structures: nanomotors. Nanoparticles. Nanocomposites and quantum dots.
